

Security Audit Report By Axsapt.

Security is often a subject we don't think about until it's too late.

While we like to think that our judgement in hiring staff ensures that we end up with honest and ethical people, we are occasionally proved wrong. Unfortunately when we are proved wrong, the costs can be substantial.

It is for these reasons that Axsapt has developed the Security Audit Report utility for Sybiz Vision.

The Security Audit Report utility captures every change made to the Customer, Suppliers an Inventory Ledger in Sybiz Vision. This data is then displayed in an easy to read report.

The practical applications of this utility can help in a variety of circumstances. From basic troubleshooting to the investigation of major fraud, the Security Audit Report can give you the answers you need.

Integrating seamlessly with Sybiz Vision, the Security Audit Report is easily accessible from the standard reports list.
